

Aspley East State School benefits from new air conditioning system.

When Bernadette Tarrant of Aspley East State School had to organise an air conditioning system to be installed during renovations to the school, she called on John Ricca, General Manager of Acer Services, to assist.

“We had a very tight window of time available during the renovations to get the air conditioning system fitted. Acer Services was able to step in and get the job done,” said Bernadette.

Controlled air where it is REALLY needed

Two classrooms at the school had to be fitted with air conditioning systems to provide controlled air to staff and students who require it for medical reasons.

“Naturally, I shopped around before deciding on Acer Services,” said Bernadette. “But I’m very happy with my choice. Not only were they very competitively priced — they were also very good about getting the job done at a time that was convenient for us.”

Acer’s proactive approach

The Acer Services team took the time to find out exactly what we required — even before they submitted the quote.

“They visited our school and talked to us about what we were looking for. They also had a look at the existing set-up that we wanted to model the new one on. And they made sure that the new system met with our requirements and fitted into our budget,” Bernadette explains.

“What’s more, everything was done according to Queensland Education Standards, so we have complete confidence that the job has been done well and that our facilities remain compliant.”

Benefits for staff and students

The new system is working very well — even under heavy demands.

“In some cases the units must operate continuously to provide the right air environment for certain students and staff members,” says Bernadette. “This can place a lot of stress on the system.”

“But the new system from Acer Services works beautifully, so that our staff and students can get the most out of every lesson.”

School installations pose unique challenges

The Acer Services team has more than 15 years of experience working in the school environment. This has equipped them to deal with the many unique challenges involved in school installations.

“They were really good about fitting into our schedule and dovetailing their work with the other contractors on site so the job was done within a single day and without any hiccups.”

The project was involved providing temperature control for two first-floor level classrooms — each had to be fitted with two air conditioning units.

“The new system from Acer Services works beautifully, so that our staff and students can get the most out of every lesson.”

The team from Acer Services planned the systems so that they were able to make use of some existing covered link areas to house the units on the outside of the building.

The difference is the detail

Acer Services lived up to their brand promise: ‘The difference is the detail’.

“What impressed me most about Acer Services was their professional approach to the project,” says Bernadette.

“So often contractors leave the place in a mess, but the Acer Services team planned well; kept us informed; did a great job; and, best of all, they left the place spotless!”

I would recommend Acer Services to anyone looking for an air conditioning system for their school. They worked with us and were very cooperative and reliable, and their workmanship was excellent.
